

Seals and Stamps

The seals and stamps authorized for registrants in Board Rule [180-12-.01](#) may be of the crimp embossing type, rubber ink stamp, or may be computer generated. The seal design is to be circular in form, the diameter of the outer circle being 1-1/2 inches, and the diameter of the inner circle being one inch.

Following is a facsimile of the stamp/seal design approved by the Georgia Professional Engineers and Land Surveyors Board. Please see O.C.G.A. 43-15-22 and Board Rule 180-12-.01 for more information. Take the following facsimile to any office supply location for referencing.

The seal or stamp should include the complete license number including the prefix and all the numbers. For example, an individual license number would be PE999999 or LS999999. The No. in each seal may be replaced with the PE, SE, or LS prefix. The name should be the same as the name the Board has on file if possible. Nick names should be avoided. If you use a middle name, the first initial should be included.
